IN BALLSPORTS*

PLAY SAFE
BALL SPORTS DURING
COVID-19

KEEP BALL SPORTS SAFE

How can we keep ball sports safe during a global pandemic?

Smartkiosk Italy presents an easy and fully automatic way for all kinds of ball sports.

PLAY SAFE submits secure and reliable disinfection of the ball before and after match and training operations in only eight seconds!

Smartkiosk Italy already introduced the device to the Italian premier league and attracted huge excitement.

HOW DOES PLAY SAFE WORK?

After inserting the ball into the device, it undergoes an enduring commotion inside a closed tank. The whole device is completely made of aluminium.

Inside the tank, a haze of microparticles is generated. This haze is based on IDROSAFE, an antiviral and antibacterial product. Due to the high concentration of the mixture of IDROSAFE and water, the ball can be fully covered in haze and therefore fully disinfected. The produced haze is environmentally friendly, so there is no risk for humans or animals.

FAST - EASY - SAFE

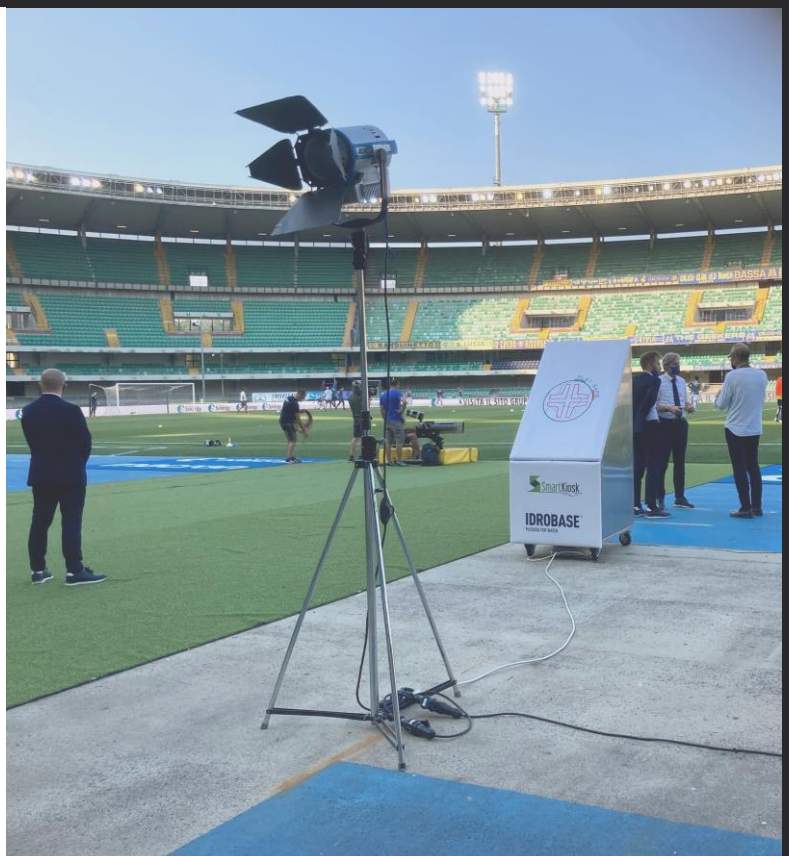

The whole disinfection process only takes eight seconds. Therefore, the ball can be disinfected safely and reliably in a minimum of time.

With **PLAYSAFE**, you have a full-aluminium device that is not only mobile applicable but also made to be used outdoors.

PLAY SAFE MEETS THE DFB AND DFL PRINCIPLES OF HYGIENE

Now is the time to create favourable moments. The global pandemic causes huge worries and insecurities in almost every area of life. Sports events however have all the while delighted millions of people. Sport is a safe haven, a hobby and sports is passion.

PLAY SAFE makes it possible to create positive memories with sports events during COVID-19 and submits a safe environment for everyone.

YOUR BENEFITS

PLAY SAFE facilitates security in uncertain times. Here you find all your benefits at a glance:

AGILE

PLAYSAFE captivates due to easy handling at highest efficiency.

MOBILE

This innovative product is made of aluminium. In combination with the low rolling resistance wheels and the fixing break, it can be moved easily. This makes it easy to use the device in different locations flexibly.

AUTOMATED

The time-controlled nebulizer is activated automatically.

FAST & SAFE

It takes the device only eight seconds to completely disinfect the ball.

FIT TO PLAY

Inside the tank, the ball is coated with antibacterial micro-haze without getting wet at all. So the ball is fit to play as soon as it leaves the device.

EFFICIENT

The device is only active during the disinfection process to ensure the effective use of the product.

PLAY SAFE

The perfect fit for security in ball sports during COVID-19 for professionals, amateurs, schools and leisure sports.
